

Eugene Kirdzei

Chief Technology Officer • High-Load Architect • Engineering Leadership & Delivery

📍 Warsaw, Poland 📞 +48500670045 📧 jauhien.kirdziej@gmail.com 🔗 linkedin.com/in/eugenekirdzei

Hands-on Chief Technology Officer and Solution Architect with 25+ years in software engineering, dedicating the last 15 years strictly to designing, scaling, and maintaining high-load web architectures. I operate at the intersection of business strategy, deep technical execution, and engineering leadership. In my recent roles, I have scaled distributed engineering teams, established streamlined delivery pipelines, and ensured 24/7 resilience for high-traffic platforms.

Core Areas of Expertise:

- Hands-on involvement in CI/CD automation, cloud infrastructure, observability, and release cycles to keep deployments fast, automated, and stable.
- Author and maintainer of open-source developer tooling and messaging packages with 540k+ total installations (github.com/nuwber/rabbitevents, github.com/rabbitevents).
- Led an engineering team of 15 (backend, frontend, DevOps, QA) within a 30-person company, fostering a culture of ownership, and driving hiring from end to end (conducted 100+ technical and leadership interviews).
- Designing fault-tolerant, scalable web platforms, event-driven architectures, caching strategies, and database optimization for peak throughput.

NUWBER, INC.

Minsk, Belarus — Warsaw, Poland

Chief Technology Officer / VP of Engineering

06/2017 – Present

- Led an engineering team of 15 across backend, frontend, DevOps, and QA, architecting the unified platform powering Nuwber and 10+ high-traffic satellite products serving millions of monthly active users at 99.9%+ uptime.
- Drove the migration to high-throughput runtimes (FrankenPHP, Hypervel) and high-concurrency data layers with PostgreSQL 17, PgBouncer, Redis, OpenSearch geo-spatial search, and Protobuf/RabbitMQ messaging.
- Managed platform security, bot mitigation, and edge performance, configuring enterprise protection via Cloudflare, Imperva, and Distil Networks to prevent scraping, block automated attacks, and accelerate global response times.
- Built the core subscription and billing infrastructure handling recurring payments, automated dunning, fraud prevention, Stripe 3DS2, and PayPal flows with GrowthBook A/B experimentation.
- Modernized cloud infrastructure into automated Kubernetes deployments with zero downtime, and engineered custom BDD/E2E test automation frameworks to shorten release cycles.

INSLY

Minsk, Belarus — Tallinn, Estonia

Team Lead

05/2016 – 06/2017

- Established and scaled the Minsk engineering office from the ground up, directing technical interviewing, hiring, onboarding, and mentoring for full-stack developers.
- Spearheaded core architectural refactoring and deep MySQL database query optimizations for Insly's multi-tenant insurance SaaS platform.
- Standardized internal engineering best practices, driving code review rigor, automated test coverage, and predictable sprint delivery cycles.

ONLINER.BY

Minsk, Belarus

Senior PHP Developer

02/2013 – 04/2016

- Architected and delivered core high-traffic backend services for Belarus's #1 media and e-commerce ecosystem (millions of daily pageviews).
- Designed from scratch and successfully launched the high-load real estate rental and sale platform (Onliner Dom), real-time forum engines, and high-frequency news feeds.
- Conducted intensive database profiling and implemented multi-tier caching layers (Memcached/Redis) across catalog and classifieds databases, reducing server response times during peak shopping traffic.

AKAVITA

Minsk, Belarus

Technical / Engineering Team Lead

09/2011 – 10/2012

- Led an engineering team of 10 developers building a large-scale, high-concurrency social network platform from greenfield to launch.
- Pioneered early commercial adoption of Node.js and Redis, designing real-time, event-driven backend messaging protocols and low-latency feed aggregation.
- Designed fault-tolerant caching strategies and database sharding architectures to handle massive traffic surges and continuous user activity feeds.

EARLIER CAREER

Minsk, Belarus

Software Developer, Team Lead, Project Manager

2005 – 2011

- Well-known Belarusian IT companies: Warecorp, Oxagile, ProntoSoft, Bylectric, EleganceIT, Belhard.
- Engineered custom CMS solutions, ERP modules, enterprise desktop utilities (C++/Delphi), and high-throughput web backends across e-commerce, banking (Tusson), and digital media clients.
- Directed end-to-end client delivery, technical specifications, and relational database schema design across diverse distributed client projects.

OPEN SOURCE & PROJECTS

RabbitEvents Library

05/2017 – Present

- Creator and lead maintainer of RabbitEvents, an open-source event-driven messaging and microservices communication framework with 540,000+ total installations.
- Architected high-throughput, resilient pub/sub tooling on top of RabbitMQ for distributed and microservices architectures.
- Built and maintain developer tooling, CI/CD automation, comprehensive test suites, and documentation adopted by production systems globally.
- Repository & ecosystem: github.com/nuwber/rabbitevents & github.com/rabbitevents

TOP SKILLS

Engineering Leadership & Strategy:

IT Strategy, Building Leadership Teams, Team Building & Scaling (30+), Technical Recruiting & Hiring, Delivery Management, Cross-Functional Leadership, Agile/Scrum.

High-Performance Runtimes & Backend:

FrankenPHP, Hypervel / Hyperf, Swoole, RoadRunner, PHP 8+, Python, Node.js, RabbitMQ, Laravel, Protobuf.

Cloud, DevOps & Security:

Kubernetes (k8s), Docker, CI/CD, Cloud Infrastructure, Cloudflare / Imperva / WAF, Bot Mitigation & Anti-Scraping, OWASP Security Standards.

Architecture & High-Load:

System & Software Architecture, High-Load Systems (HA 99.9%+), Distributed Microservices, Event-Driven Architecture (EDA), API Design (REST/RPC), Concurrent Programming.

Data Stores & Search:

PostgreSQL (Performance Tuning, PgBouncer), Elasticsearch / OpenSearch, Redis, MongoDB, BigQuery, MySQL Performance Optimization.

Testing & Growth:

Behat (BDD/TDD Automation), PHPUnit, A/B Testing & Feature Flags, SaaS Monetization & Stripe Billing, Open-Source Development (RabbitEvents).

EDUCATION

State Vocational Diploma in Sound Engineering & Audio Post-Production

ROE Szkoły Policealne

09/2024 – 09/2026 | Warsaw, Poland

B.S. in Computer Science & Software Engineering

BSUIR

2006 – 2008 | Minsk, Belarus

B.S. in Business Administration & Management

BSAA

Project Management

Associate Degree in Business Economics & Management

SSAEC

1997 – 2000 | Stolin, Belarus

LANGUAGES

- Belarusian
- Russian
- English
- Polish
